II. MANAGEMENT REPORT

2.1. Overall results

The sales revenues of the Group in the reporting period amounted to EUR 81.41 million compared to EUR 80.09 million in 2022.

The Group had a gross loss of EUR 0.62 million in the reporting period, while last year it had a gross profit of EUR 15.27 million. The main reason for the Group's financial performance is fallen purchase prices for organic products, however, in the last quarter of the year, all segments of the Group worked profitably.

The Group's EBITDA for the reporting period was EUR 1.48 million. In 2022, EBITDA was EUR 19.58 million.

Main financial results, EUR million	12-month of 2023	12-month of 2022	12-month of 2021	Variance 2023/2022, %	Variance 2022/2021, %

EBITDA margin	2%	24%	13%	-92%	+85%

2.2. Crop growing segment overview

Results of crop growing segment consist of crop harvest fair value, sales of the previous and current year harvest and agricultural subsidies.

Harvest in the season of 2022/2023

The total cultivated land area by the Group amounted to 38.2 thousand hectares (ha) in the 2022/2023 season and is slightly less than the cultivated area in the 2021/2022 season. In the 2022/2023 season, 29.8 thousand ha is seeded with crops (30.1 thousand in the 2021/2022 season) out of which 11.3 thousand ha is dedicated to wheat, 8.1 thousand ha to legumes and 10.4 thousand ha to other cash crops. The majority – 10 thousand ha out of total 11.3 thousand ha – of wheat is winter wheat as winter crops usually have higher yield potential compared to summer alternatives. Forage crops comprise 7.1 thousand ha in the 2022/2023 season compared to 7.7 thousand ha in the 2021/2022 season.

As of 31 December 2023 the Group has fully completed the harvest of 2022/2023. The gain (loss) on revaluation of agricultural produce was calculated for crops (wheat, legumes and other cash crops) that were harvested by the end of the reporting period. Value of forage crops was based on actual costs.

Harvest of 2023/2024

At the end of each quarter the Group evaluates the fair value of crops which have not yet been harvested. The weather conditions during 2023 autumn were favourable for the preparatory work needed for 2023/2024 season. The sowing of winter crops and land tillage work were completed according to schedule. In 2023 there were 22 thous. ha dedicated to winter crops – wheat, triticale, rapeseed, clover, barley, rye and vicia –

(All amounts are in EUR thousand, unless stated otherwise)

which will be harvested in 2024. This adds up to 72% of land that was sown with wheat, legumes and other cash crops for the 2023/2024 season. For comparison, in 2022/2023 season there was 17 thous. ha of winter crops sown. Winter crops are in good condition at the time reporting of financial statements. Based on the Group's judgement, the mild winter should not have an adverse effect on the upcoming harvest. Favorable conditions in autumn enabled the Group to complete all the necessary land tillage work and prepare the land for the 2023 spring sowing. The Group is well prepared for the 2022/2023 season and is very optimistic with regards to the potential of the next year's harvest.

As of 31 December 2023 the group has evaluated the gain (loss) on revaluation of agricultural produce for crops that will be harvested in 2024. The calculation was based on the formula given below:

Fair value of a crop = Costs incurred + (Cultivated area in ha * forecasted average yield as tonnes per ha * forecasted price per tonne – cultivated area in ha * forecasted total cost per ha) * T, where:

- Cost incurred is cost actually incurred for a particular crop as of 31 December 2023.
- Cultivated area in ha is the area of a particular crop seeded and expected to be harvested.
- Historical average yield tonnes per ha.
- Forecasted price per tonne. Contracted average sales prices are used for fair value estimation adjusted according to the development in the market.
- Forecasted total cost per ha - average historical cost levels after evaluating the current situation.
- T is the portion of time that has already passed from sowing date until the forecasted harvest date expressed as a percentage. As of 31 December 2023, the average completion percentage estimated for next year's harvest crops was around 25%.

The formula discussed above will be used to estimate fair value of cash crops (winter and summer crops) for coming quarters and until the actual harvest will be completed. Forecasted parameters used in the fair value estimation will be re-evaluated quarterly and adjusted by taking into consideration the most recent data.

It should be noted that the fair value of a forage crop, even at its point of harvest, is measured based on production costs incurred on a forage crop. In other words, forage crop production costs are used as a measure of the fair value of that forage crop since there is no active market for forage crops and there is no reliable data to calculate market prices of the forage crops. Due to this the net result on revaluation of forage crops is equal to zero.

Table below provides harvested land plot of wheat and legumes in the current and past two seasons. Land plot of wheat and legumes increased in the season of 2022/2023 compared to previous period and constituted 65% of all cash crops land plot compared to 61% in the previous season.

Harvested land plot by culture group, HA	12-month of 2023	12-month of 2022	12-month of 2021	Variance 2023/2022, %	Variance 2022/2021, %
Wheat	11,345	11,693	10,441	-3%	+12%
Legumes	8,077	6,785	8,056	+19%	-16%
Other crops	10,411	11,628	12,397	-10%	-6%

Comparison of wheat, legumes and other cultures average cost per hectare of land is provided in the table below. It is important to note that the analysis of costs in the 3rd quarter was performed based on the data available at the time. However, after the 4th quarter the group performs a more extensive cost analysis.

Cost per 1 ha cultivated land, EUR/ha	12-month of 2023	12-month of 2022	12-month of 2021	Variance 2023/2022, %	Variance 2022/2021, %
Wheat	1,095	1,033	786	+6%	+31%
Legumes	963	926	802	+4%	+15%
Other crops	1,302	1,237	1,085	+5%	+14%

(All amounts are in EUR thousand, unless stated otherwise)

As seen from the data the average cost of wheat in the season of 2022/2023 increased by 6% while the cost of legumes has increased by 4% compared to previous season. The cost increase was due to the prices of fertilizers and seeds which reached highs in the current season. The rise in average salary which led to an increase in wages cost also contributed to the average cost growth.

Table below depicts wheat, legume and other crops yields in the current and past two seasons. Wheat yield in 2023 was 3.55 t/ha which is 4% higher than wheat yield in the equivalent period last year. Legumes yield in 2023 decreased by 39% compared to previous year from 2.32 t/ha to 1.41 t/ha. Legumes were mainly affected by the yield of beans which differs significantly over last year due to drought which occurred at the beginning of the 2023 season and caused the decrease of yield in the season of 2022/2023.

Average yield, t/ha	12-month of 2023	12-month of 2022	12-month of 2021	Variance 2023/2022, %	Variance 2022/2021, %
Wheat	3.55	3.41	3.27	+4%	+4%
Legumes	1.41	2.32	1.09	-39%	+113%
Other crops	5.93	4.47	5.72	+33%	-22%

Comparison of yields of the Group and farms in Lithuania:

NOTE: The data of LT organic farms for 2023 has not yet been published, the data of conventional farms in the LT is preliminary.
Reference: LCSS Institute of Economics and Rural Development, Forecasts of crop area, yield and harvest of agricultural crops in 2023, the Group's data.

Table below depicts comparison of wheat, legumes and other crops prices at which the harvest was evaluated (at fair value) in the seasons of 2022/2023, 2021/2022 or 2020/2021. It should be noted that at the time of the publication of the financial statements for the four quarters of 2023, significant part of the 2022/2023 season harvest has already been sold or contracted at fixed prices, therefore fair value of the crops was estimated based on average contract prices.

Average price of 1 tonne of crop, eliminating sales costs, EUR/t	12-month of 2023	12-month of 2022	12-month of 2021	Variance 2023/2022, %	Variance 2022/2021, %
Wheat	260	403	240	-35%	+68%
Legumes	467	576	347	-19%	+66%
Other crops	204	246	189	-17%	+30%

As can be seen from the data above, the price of 1 tonne of wheat in the season of 2022/2023 decreased by 35% while legumes dropped 19% compared to previous season. This was mainly affected by one of the lowest purchase prices of organic production in the last year.

Table below provide information on gain (loss) per hectare for wheat, legumes and other crops.

Gain (loss) on revaluation of agricultural produce at point of harvest, EUR/ha	12-month of 2023	12-month of 2022	12-month of 2021	Variance 2023/2022, %	Variance 2022/2021, %
Wheat	(170)	341	2	n/a	+16 950%
Legumes	(302)	458	(422)	n/a	n/a
Other crops	(91)	(137)	(10)	-34%	-1 270%

In the 2022/2023 season the loss of wheat as well as legumes per hectare amounted to EUR 170 and EUR 302 respectively, while a profit was recorded in the previous season. The main reasons for this loss, as mentioned in the text above, are the sharp drop in the purchase prices of organic production, the increased cost of fertilizers, seeds as well as wages and the low yield of legumes. Precisely because of the low organic

(All amounts are in EUR thousand, unless stated otherwise)

prices and the sensitivity of summer organic crops to weather conditions a third of the land will be cultivated using regenerative conventional farming in the coming season. As a consequence, the areas of summer organic crops will be 40% smaller compared to this season.

As of 31 December 2023, the Group recognized a EUR 5.24 million loss on the initial recognition of biological assets at fair value. It should be noted that as of 31 December 2022 Group has already recognised a gain of EUR 1.97 million on the initial recognition of biological assets at fair value. At the end of the reporting period the Group has also calculated EUR 1.49 million gain on the initial recognition of biological assets at fair value for the 2023/2024 season's crops. Thus, loss on the initial recognition of biological assets at fair value accounted for the year 2023 amounts to EUR 5.73 million.

Crop growing segment sales results

Total revenue generated from sales in the crop growing segment amounted to EUR 30 million in 2023, which marks an increase of EUR 2.42 million in revenue compared to 2022. Sales revenues were increased by higher quantity of the harvest sold this year.

Crop growing segment results, EUR million	12-month of 2023	12-month of 2022	12-month of 2021	Variance 2023/2022, %	Variance 2022/2021, %
Sales revenue	30.00	27.58	23.56	+9%	+17%

Result of sales of agricultural produce	(6.62)	(2.07)	(5.64)	-220%	-64%

The crop growing segment's cost of sales of 2023 amounted to EUR 33.47 million, 21% more compared to the same period of last year. Cost of sales exceeded sales revenue due to crops sold at below-revenue post-harvest prices. Due to more effective maintenance of inventories, write-offs are decreasing – at the end of 4th quarter of 2023 they amounted to only EUR 0.45 million, compared with EUR 1.26 million in the same period last year. Internal transactions between segments are executed based on fixed pricing and in the end of 2023 its effect amounted to a loss of EUR 2.70 million.

Agricultural subsidies and gross profit of the crop growing segment

Total amount of agricultural subsidies accrued in 12 months of 2023 was EUR 9.12 million which is slightly less compared to the subsidies accrued in the same period last year. Accrued subsidies amount is based on calculations according to currently applicable and achievable requirements of subsidising programmes regulations as of 31st December. Although, payments per hectare have increased, in total the Group will receive about EUR 1 million less per year than last year due to the conversion of a part of organic land to conventional land.

The gross result of the crop growing segment, encompassing the results of agricultural produce sales, gain (loss) on changes in fair value of biological assets and agricultural subsidies, has decreased in 2023 when compared to last year due to a decrease in result on revaluation of biological assets at fair value and lower selling prices of agricultural products. Gross loss amounted to EUR 3.23 million at the end of 2023. In the same period of 2022, it was EUR 12.43 million.

Gross profit of crop growing segment, EUR million	12-month of 2023	12-month of 2022	12-month of 2021	Variance 2023/2022, %	Variance 2022/2021, %

Gross profit	(3.23)	12.43	0.89	n/a	+1 325%

(All amounts are in EUR thousand, unless stated otherwise)

2.3. Dairy segment overview

The quantity of milk produced in the four quarters of 2023 increased by 2% compared to the same period last year, even though average herd size of dairy cows decreased from 3,539 (in the four quarters of 2022) to 3,456 (in the four quarters of 2023). It was compensated by average milk yield which during the 12-month period of 2023 grew by 5% compared to the same period last year.

Although the quantity of milk produced was higher, the total quantity sold decreased due to the consumption of the part of milk for a new line of dairy products, the result of which is reflected in the FMCG segment.

During the year of 2023 milk purchase prices decreased by 18% compared to 2022, which had the main impact on the results of the segment. Dairy sales revenue fell to EUR 14.74 million in the reporting period, compared to EUR 16.50 million last year.

Dairy segment maintained a higher level of cost of sales which amounted to EUR 14.97 million during the 12 months of 2023 and that is EUR 0,06 million more than in the same period last year. The growth of costs was mainly influenced by an increase in salary expenses, growing prices of feeds.

In 2023, a loss of EUR 3 million was incurred due to the revaluation of biological assets (animal herd). In comparison, the loss due to the revaluation of biological assets (animal herd) was 30% lower last year.

After the Group improved milk yield, controlled production costs and cost price in the last quarter of 2023 as well as production prices rise in November and December 2023, the segment's gross loss decreased by 33% from the announced result in the previous quarter and reached EUR 0.40 million.

2.4. Mushroom segment overview

In the last quarter of 2023, the segment showed particularly good results. Segment profit in the 4th quarter of 2023 amounted to EUR 0.6 million and was EUR 0.50 million higher compared to the same period last year. Although the volume of production remained similar to 2022, the control of production costs and the decrease in energy prices enabled costs to be maintained at the 2022 level. Sales prices increased by 10% in 2023, remained at this level and have the potential to increase in 2024. Excluding packaging & transportation, the growth of mushroom price is even bigger.

Cost of sales amounted to EUR 29.00 million in the four quarters of 2023, which is lower than last year. The average cost of sales per 1 tonne of mushrooms sold has also decreased from 2,505 EUR/tonne to 2,483 Eur/tonne.

In 2023, the mushroom growing segment generated a gross profit of EUR 1.72 million, compared to a gross loss of EUR 1.4 million in 2022.

	12-month of 2023	12-month of 2022	12-month of 2021	Variance 2023/2022, %	Variance 2022/2021, %

2.5. Fast-moving consumer goods (FMCG) segment

In 2023, the gross profit of the FMCG segment was EUR 1.29 million, compared to a gross profit of EUR 1.74 million in 2022. In mid-2023, the sale of 100% shares of the Kooperatinė bendrovė Grybai LT, a producer of canned products, had the most significant impact on the segment's result.

In 2023, the Group launched a new line of organic dairy products for consumers and aims to increase product's range and expand its sales network.

FMCG segment results, EUR million	12-month of 2023	12-month of 2022	12-month of 2021	Variance 2023/2022, %	Variance 2022/2021, %

The 2023 FMCG sales revenue structure with respect to product types is depicted in the chart below.

Revenue structure of the fast moving consumer goods sales, %

During the 12-month period of 2023 the Group has exported its products to 35 countries compared to 33 countries in the same period in 2022.

2.6. Selling and administrative expenses

The Group's selling and administrative expenses amounted to EUR 14.93 million in 2023, compared to EUR 12.77 million in 2022. Selling and administrative expenses were increased by marketing expenses, investments related to the introduction of new end-consumer products, and higher employee.

2.7. Capital expenditures

Total investments (additions) into property, plant and equipment amounted to EUR 7.24 million in the four quarters of 2023 (EUR 7.21 million in the same period last year). The split of investments (additions) into property, plant and equipment is provided in the table below.

The Group continues to develop its technology projects and is preparing to scale them. The AUGA M1 tractors from the first production batch are being further tested. AUGA Tech obtained a patent in the USA, the States to the Eurasian Patent Convention and Australia for the structure of the AUGA M1 biomethane and electric-powered tractor for large farms. The company indirectly owned by the AUGA group, has applied for patents in other strategic markets.

In November 2023, the Group announced the confirmed results of testing of its feed technology. Tests showed that the technology enables an increase in the milk yield with no impact on the milk's quality and a reduction of the methane emissions from cows' digestive processes by 32% per litre of raw milk. The test results were evaluated and their validity was confirmed by scientists from the Veterinary Academy of the Lithuanian University of Health Sciences.

Three biomethane plants are being prepared for the biomethane gas supply to the natural gas grid.

IV. EXPLANATORY NOTES

1. Basis of the preparation

The accompanying interim financial information for the 12-month period ending 31 December 2023, has been prepared in accordance with IAS 34, 'Interim financial reporting'. This financial information should be read in conjunction with the annual financial statements for the year ending 31 December 2022 which have been prepared in accordance with IFRS as adopted by the EU.

The presentation currency is euro (EUR). The financial statements are presented in thousands of euro, unless indicated otherwise. Financial statements for the 12-month period ending 31 December 2023 are not audited. Financial statements for the year ending 31 December 2022 are audited by the external auditor UAB PriceWaterhouseCoopers.

Critical accounting estimates and assumptions

The preparation of financial information in conformity with IAS 34 requires the use of certain critical accounting estimates. It also requires management to exercise its judgement in the process of applying the Group's accounting policies. The areas involving a higher degree of judgement or complexity, or areas where assumptions and estimates are significant to the consolidated financial information, are disclosed below. Critical accounting estimates remain the same as disclosed in the audited annual financial statements for period ending 31 December 2022.

IFRS 16, Leases

Based on IFRS 16, the Group recognised lease liabilities in relation to leases which had previously been classified as 'operating leases' under the principles of IAS 17 Leases. These liabilities were measured at the present value of the remaining lease payments, discounted using the lessee's incremental borrowing rate as of 1 January 2019. The weighted average lessee's incremental borrowing rate applied to the lease liabilities as of 31 December 2022 was 6%. The incremental borrowing remained unchanged in 2023.

In applying IFRS 16, the Group has used the following practical expedients permitted by the standard:

- the use of a single discount rate to a portfolio of leases with reasonably similar characteristics;
- reliance on previous assessments on whether leases are onerous;
- the accounting for operating leases with a remaining lease term of less than 12 months as short-term leases (which were recognized as expense on a straight-line basis);
- the exclusion of initial direct costs for the measurement of the right-of-use asset at the date of initial application;
- the use of hindsight in determining the lease term where the contract contains options to extend or terminate the lease.

Revaluation of biological assets (crops)

The Group estimates the total fair value of crops using following formula and assumptions:

Fair value of the crop = Costs incurred + (Cultivated area in ha * forecasted average yield as tonnes per ha * forecasted price per tonne – cultivated area in ha * forecasted total cost per ha) * T, where:

- Cost incurred is cost actually incurred for particular crop during the season till the reporting date.
- Cultivated area in ha is an area of particular crop seeded and expected to be harvested.
- Forecasted average yield tonnes per ha.
- Forecasted price per tonne. Contracted average sales prices are used for fair value estimation adjusted according to the development in the market.
- Forecasted total cost per ha. Average historical cost levels after evaluating the current situation.
- T is a time portion, spanning from the sowing date to the forecasted harvest date.

Revaluation of biological assets (livestock)

Fair value of milking cows is valued by using the discounted cash flow method. The model uses projected revenues from milk sales over the remaining useful life of each animal using a forecasted milk price. Milk price forecast is the average milk price assumption of the following 4 years was. Current cow herd has an estimated working life of 1 to 4 years. At the end of the working period the cow is estimated to be sold for meat. The forecasted revenues are reduced with costs directly related to herd growing (feeds, medicines, employee salaries and other). The free cash-flow is discounted with post tax WACC.

For valuation of other livestock the Group calculates the fair value by taking the average price of meat per kilo. For young bulls and heifers, the value of livestock is determined by using the market values of meat (different for different groups of animals) and multiplying the price of 1 kg by the total weight of specific group of animals.

Share-based payments

Total cumulative expenses of share-based payments are calculated based on the formula described below. The expenses are accrued in the profit (loss) statement and equity based on the days lapsed since the grant date till the reporting date. Each year the entity will revise the expense to reflect the best available estimate of the number of equity instruments expected to vest.

The total expenses of share-based payments are calculated based on the formula:

$$\text{Share price @ grant date} \times \text{Granted shares} \times (1 - \text{annual staff turnover})^{(\text{vesting period})}$$

(All amounts are in EUR thousand, unless stated otherwise)

Where:

The share price of options is based on the closing price at grant date at which the company's shares are traded on the Nasdaq Stock Exchange.

The grant date of the Option is set to be the date of the share-based payment agreement between the Company and the receiver as all the terms and conditions are set in this agreement and there are no other arrangements which would need to be confirmed at a later date.

Granted shares – shares to be granted to employee based on the Option agreement.

Staff turnover – chance that the option will be exercised is adjusted by the forecasted staff turnover percent during the vesting period. The ratio is calculated based on historical staff turnover data of 2 years. The historical staff turnover data includes turnover only of the positions which are set to receive the share-based payments. The turnover of other positions is excluded from the ratio.

There are option agreements which are signed with a special condition – that the receivers do not need to fulfil the service condition, but they will still need to wait 3 years vesting period before being able to exercise the option. Due to this staff turnover adjustment is excluded in the calculation of the expenses of these options as it does not affect their chances to receive the option.

Vesting period is set in the Option agreement and is equal to 3 years.

3. The structure of the Group

As of 31 December 2023, the Group consisted of the Company and 163 subsidiaries (31 December 2022: 139). Detailed list of all subsidiaries in 2023 and 2022 is provided below.

The number of companies increased as the Group implemented organizational changes to introduce a new business model based on three main directions:

- development and production of sustainable agricultural technologies;
- organizing agricultural activities through cooperatives, applying the "AUGA" sustainable farming standard, and
- supply of more sustainable food products to consumers.

There was created a new organizational structure to implement the new business model:

- Established companies will directly develop the activities of a new business model;
- 11 cooperative companies were established, the founders and members of which are Group farms. The companies will cultivate the land of the cooperative's member farms and provide other agricultural services to their members and, if there is free capacity, to other farms as well.
- Separated and refined other activities.
