### Note 2 Basis of preparation and significant accounting policies

#### **Statement of compliance**

The separate and consolidated financial statements have been prepared in accordance with International Financial Reporting Standards (IFRSs) as adopted by the European Union (EU).

#### **Basis of measurement**

The financial statements have been prepared on the historical cost basis except for financial assets at fair value through profit or loss, available-for-sale financial assets and investment property, measured at fair value, and buildings measured at revalued amounts.

#### **Functional and presentation currency**

These financial statements are presented in EUR, which is the Bank's and its subsidiaries' functional currency unless otherwise stated. On 1 January 2015, the Republic of Lithuania joined the euro area and the Lithuanian national currency litas was replaced by the euro.

The official exchange rates of the main currencies, used for the revaluation of the items in the statement of financial position as at the year-end were as follows (EUR units to currency unit):

|     | <b>31 December 2018</b> | <b>31 December 2017</b> |

### Note 2 Basis of preparation and significant accounting policies (cont.)

#### *The expected credit loss impairment model*

From 1 January 2018 the Bank and the Group adopted IFRS 9. The Group prepared and implemented model of expected credit loss (ECL) evaluation which is applied to financial instruments such as loans to customers, finance lease receivables, debt securities, placements with banks and other financial assets.

Expected credit loss is evaluated depending on changes in credit risk of exposure since the initial recognition, taking into account unbiased future oriented information even if no actual loss was incurred. ECL model is based on past events, current conditions and forecast of future economic conditions which can make impact on expected future cash flows. Therefore credit loss impairment allowances now are more sensitive to changes in forecasts of future economic conditions and can fluctuate more than before the adoption of IFRS 9.

The expected credit loss impairment model is based on the actual credit loss experience over the past seven years. Loan portfolio exposures were segmented to corporates or individuals, and corporates were segmented as those that are linked to the real estate industry (real estate development, rent or selling) or not.

Off-balance sheet exposures are divided into 3 stages the same way as appropriate balance-sheet exposures. ECL's are calculated in the same way as for appropriate balance-sheet exposures.

Estimated impact of IFRS 9 application for the 1 January 2018 is disclosed in the tables below.

#### Impact of IFRS 9 application on impairment

#### Note 19 Fair values of financial instruments

Fair value is defined as the amount at which the instrument could be exchanged in a current transaction between knowledgeable willing parties on arm's length conditions, other than in a forced transaction, involuntary liquidation or distress sale. As no readily available market exists for a large part of the Bank's and the Group's financial instruments, judgment is necessary in arriving at a fair value, based on current economic conditions and the specific risks attributable to the instrument.

For financial assets and financial liabilities that have a short-term maturity (less than three months) it is assumed that the carrying amounts approximate their fair value. This assumption is also applied to variable rate financial instruments, as the Group and the Bank did not identify significant increases in credit spreads.

The fair value of fixed rate financial assets and liabilities carried at amortised cost are estimated by comparing market interest rates when they were first recognised with current market rates offered for similar financial instruments. The estimated fair value of fixed interest bearing loans and deposits is based on discounted cash flow using prevailing market interest rates for debts with similar credit risk and maturity.

The following describes the methodologies and assumptions used to determine the fair value for those financial instruments:

**Cash.** Represents cash on hand for which the carrying amount is its fair value.

**Amounts due from and to credit institutions.** For assets maturing within three months, the carrying amount approximates the fair value due to the relatively short-term maturity of these financial instruments. For longer-term deposits, due to the repricing of assets to the market interest rates, the interest rates applicable approximate market rates and, consequently, the fair value approximate the carrying amounts.

**Loans to customers.** The estimate was made by discounting of scheduled future cash flows of the individual loans through the estimated maturity using prevailing market rates as at the respective end of third quarter.

#### Note 19 Fair values of financial instruments (cont'd)

**Amounts due to customers.** For balances maturing within three months the carrying amount approximates the fair value due to the relatively short maturity of these financial instruments. For longer term fixed interest bearing deposits and other borrowings the estimated fair value is based on discounted cash flows using interest rates for new debts with similar remaining maturity and credit quality.

**Debt securities issued and subordinated loan.** The fair value is calculated discounting of scheduled future cash flows using current market rates.

In the table below the carrying amounts and fair values of financial instruments which are not carried at fair value in the financial statements are presented. This table does not include the fair values of non-financial assets and non-financial liabilities.

#### Note 19 Fair values of financial instruments (cont'd)

Financial instruments which are carried at fair value in the financial statements are distributed by 3 levels:

Level 1: quoted (unadjusted) prices in active markets for identical assets or liabilities;

Level 2: other techniques for which all inputs which have a significant effect on the recorded fair value are observable in the market, either directly or indirectly;

Level 3: techniques which use inputs which have a significant effect on the recorded fair values that are not based on observable market data.

The following table shows an analysis of financial instruments recorded at fair value by the level of the fair value hierarchy:

### Note 21 Risk management

#### Credit risk

Credit risk is the risk that the Group and the Bank will incur loss because their customers or counterparties failed to discharge their contractual obligations. The Group and the Bank manage and control credit risk by setting limits on the amount of risk they are willing to accept for individual counterparties and for industry concentrations, and by monitoring exposures in relation to such limits. The Group and the Bank have established a credit quality review process to provide early identification of possible changes in the creditworthiness of counterparties, including regular collateral revision. The credit quality review process allows the Group and the Bank to assess the potential loss to which it is exposed and to take corrective action. The Bank makes available to its customers guarantees which may require that the Bank makes payments on their behalf. They expose the Bank to similar risks as loans and these are mitigated by the same control processes and policies. In cases, when cash flows of nonperforming loans are based on expected cash flows to be recovered from sale of collateral, value of the collateral is an important estimate in calculating impairment losses for loans and receivables.

The Bank and the Group have to comply with the limit to large exposures (maximum exposure to single customer) set in Regulation (EU) No 575/2013 of the European Parliament and of the Council. Exposure to a customer or group of connected customers can not exceed 25 % of the Bank's and Group's eligible capital. Compliance to this requirement is disclosed in the table below:

Debt securities' are held-to-maturity and are measured at amortised cost. The Group and the Bank have no impaired or overdue amounts within investment activities.

The Group and the Bank have assigned bonds with ratings from international rating agencies from „AAA“ to „A“ to high grade, „BBB“ to „B“ rating bonds – to standard grade.

##### Credit risk assessment

When evaluating financial instruments, the Group and the Bank apply specific valuation criteria and procedures on the clients. Due to the change in credit risk since initial recognition loans are divided into three stages:

- Stage 1 – all performing loans, unless there has been a significant increase in credit risk since the initial recognition, and it's expected that the borrower has strong capacity to meet contractual future cash flows.
- Stage 2 – loans when there has been a significant increase in credit risk since initial recognition.
- Stage 3 – all defaulted loans with recognised loss events and POCI (purchased or originated credit-impaired) assets.

### Note 21 Risk management (cont.)

#### Liquidity risk

Liquidity risk refers to the availability of sufficient funds to meet deposit withdrawals and other financial commitments associated with financial instruments as they actually fall due. In order to manage liquidity risk, the Group and the Bank perform daily monitoring of future expected cash flows on clients' and banking operations, which is a part of assets/liabilities management process. The Board of Directors sets limits on the minimum level of assets of different level of liquidity that should be in place to cover withdrawals at unexpected levels of demand.

The Bank and the Group is required to satisfy the minimum requirement of liquidity coverage ratio according to Regulation (EU) No 575/2013 of the European Parliament and of the Council. Liquidity coverage ratio (LCR) refers to highly liquid assets held by the Bank or the Group in order to meet short-term obligations. The Bank or the Group is required to hold an amount of highly-liquid assets, such as cash, funds in Central bank, highly rated treasury bonds and other liquid financial instruments, equal to or greater than net cash outflow over a 30-day period, i.e. liquidity coverage ratio cannot be lower than 100 percent. Liquidity coverage ratios of the Bank and the Group are as follows:

| The Group        |                  |  | The Bank         |                  |

#### Market risk

Market risk is the risk that the fair value or future cash flows of financial instruments will fluctuate due to changes in market variables, such as interest rates, foreign exchange rates and equity prices. The market risk is managed and controlled by continuous market monitoring and analysis of forecasted market changes.

##### Interest rate risk

Interest rate risk arises from the possibility that changes in interest rates will affect future cash flows or the fair values of financial instruments. The Board has established internal limits, monitors compliance with the required limits are monitored on a monthly basis. Interest rate risk is managed by forecasting the market interest rates and managing the mismatches between assets and liabilities from re-pricing maturities. The Group and the Bank apply the interest rate risk management methods allowing to measure the Bank's and the Group's sensitivity to interest rate changes by computing the impact to yearly net interest income in case of parallel shift by 1 percentage point in the yield curve.

The following table demonstrates the sensitivity to change in interest rates, with all other variables held constant, on the Bank's and the Group's pre-tax income (which equals the effect on net interest income):

#### Currency risk

The currency risk is managed by monitoring the risk exposure against the limits established for single open currency position. Positions are monitored on a daily basis. Our policy is to keep foreign exchange positions more or less closed.

The Group and the Bank are exposed to effects of fluctuation in the prevailing foreign currency exchange rates on its financial position and cash flows. The Board of Directors sets limits on the level of exposure by currencies, by branches, by subsidiaries and in total. These limits also comply with the minimum requirements of the Bank of Lithuania. The Bank's and the Group's exposure to foreign currency exchange rate risk is as follows:

| The Group        |                  |   | The Bank         |                  |

#### Note 22 Capital

The primary objectives of the Group's and the Bank's capital management are to ensure that the Group and the Bank comply with externally imposed capital requirements and that the Group and the Bank maintain healthy capital ratios in order to support their business and to maximise the shareholders' value.

The Group's and the Bank's capital management procedures are based on the regulatory capital requirements contained in the Capital Requirements Directive (CRD) and in the Capital Requirements Regulation (CRR) No. 575/2013. According to these requirements capital requirement level is determined on several levels: the minimum capital requirement on first level, an additional capital adequacy requirement to cover potential losses on the second level and a total capital requirements.

2,2 % the additional capital requirement amount is determined from 30 September 2018 during supervisory review by the Bank of Lithuania and evaluation process (SREP). Capital requirement was decreased 1.2 percentage points comparing with applied value at the beginning of the year. From 30 September 2018 the Group and the Bank require to maintain common equity Tier 1 capital ratio of 9.2 %, Tier 1 capital ratio of 12.7 % and a total capital adequacy ratio of 12.7 %. The Group and the Bank capital adequacy ratio exceeded the required minimum. From 31 December 2018 came into force anti-cycling buffer requirement 0.5 percent for positions located in Lithuania.

Capital adequacy ratio calculation summary is presented in the table below:
